#### **DETAILED ACTION**

- 1. This Office Action is an answer to the IDS received on 7/12/2004.
- 2. Claims 1-13 are pending in this application.

## **Drawings**

3. The submitted drawings are acceptable for examining purposes.

## Claim Rejections - 35 USC § 112

4. Claims 1, 7, and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The IF decision would make the claimed system/method/medium STOP a process, for a "FALSE" answer (i.e., "if the monitored at least one of the speed and torque is not decreasing, enabling the engine of the vehicle to operate ant a reduced power level, and…".

For above assumption, the examiner submits that these claims lack of reciting a 'TRUE" answer.

### Claim Objections

5. Dependent claims 2-6, 8-12 are objected because they inherit above deficiency from independent claims 1, and 7.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Muise et al., Fig. 4C),

- 6. Claims 1-13 are rejected under 35 U.S.C. § 102(b) as being anticipate by Muise et al. (US Pat. 5,758,306).
- A. As to independent claims 1, 7, and 13: As best interpretation, Muise et al. suggest a method, a system, and a medium for controlling a vehicle, comprising:
- reducing a speed of the vehicle in response to a vehicle shutdown signal (i.e., transmitting a signal to slow down the vehicle below idling speed, and then to stall the engine by total fuel shut off see Muise et al., the abstract, and col. 2 lines 16-26), monitoring a speed of the vehicle, and determining whether a vehicle speed is decreasing (i.e., by viewing/observing, and estimation from a POLICE CRUISER, see

The following IF condition is decided for a "YES" or "NO" answer; the examiner assumes that IF is "FALSE" (i.e., the vehicle speed IS DECREASING), then the claim STOP HERE.

- IF "True", reducing operating power level of the vehicle's engine (see Muise et al., claims 5, and 15);

Muise et al. also use a reference speed to stop the vehicle (i.e., a speed has reached a predetermined level – see Muise et al., col.3 lines 53-59).

- B. As to claims 2-3, and 8-9: Muise et al. teach that vehicle shutdown signal is generated in response to a predetermined condition such as using by an unauthorized operator (see Muise et al., col. 2 lines 30-38).
- C. As to claims 4, and 10: Muise et al. teach that vehicle shutdown signal is transmitted to the vehicle with a transmitter P (see Muise et al., Figs. 4A-4C).

- D. As to claims 5, and 11: Muise et al. teach that a reduction is initiated by interrupting a fuel supply to the engine of the vehicle (see Muise et al., Fig. 2C refs. 4, 9; and claim 15).
- E. As to claims 6, and 12: Muise et al. teach that after stopping the vehicle, the engine of the vehicle can be started in response to a second predetermined condition (i.e., "after vehicle recovery, a subsequent transmission from the police transmitter, such as a coded number of impulses, may reset the management system or multi-stage valve for resumption of operation." see Muise et al., col. 5 lines 58-61).

#### **Conclusions**

- 7. The prior art made of record, which are listed in PTO-892, and not relied upon are considered pertinent to applicant's disclosure.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to CUONG H. NGUYEN whose telephone number is 571-272-6759 (email address: cuong.nguyen@uspto.gov). The examiner can normally be reached on 9:00 am 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, THOMAS G. BLACK can be reached on 571-272-6956. The Rightfax number for the organization where this application is assigned is 571-273-6759.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov.
